

Problem B: Pizza Slices

A student townhall meeting is to be held and you are helping with planning. Your task is to write a simple program to help the organizers to order pizza. Given a number of pizzas, you need to calculate how many slices of pizza will be available, assuming that each pizza consists of 8 slices.

Input

The program reads one non-negative integer, which represents the number of pizzas.

Output

The program must print the number of pizza slices on a line by itself, assuming that each pizza consists of 8 slices. Do not forget that a line ends with a new-line character.

Sample Input

5

Sample Output

40
